

**METHOD AND SYSTEM FOR DETERMINING CONSTRAINTS FOR A
PRINTED CIRCUIT BOARD DESIGN MODULE**

Abstract of the Disclosure

5 A method for generating a printed circuit board design module is
provided. The method includes compiling information that is usable to derive
one of more low level details associated with a printed circuit board, determining
one or more high level constraints that are usable with the information to
generate the low level details, and generating the printed circuit board design
10 module such that the printed circuit board design module includes the
information and such that the printed circuit board design module is configured
to receive the one or more high level constraints..
